The Formentera Social Welfare Department reports that the Formentera Day Centre (Centre de Dia) will resume activities Monday 15 February with enhanced tier 4 safety regulations in place.

The public health situation forced the island's care facility for adults to shutter on 4 January. It will reopen Monday now that all attendees and staff have been vaccinated and the mandatory 10- to 15-day wait period has elapsed after second-round jabs were administered on 5 February.

In the interim, targetted care has been available by appointment. Twenty-five of 33 beneficiaries will return on Monday; the remaining eight have opted to stay home.

The full range of recommended safety measures will be observed, with islanders subject to strict checks of hand-washing, body temperature, masks and social distancing. PPE is provided at the centre.
